

Company Overview

Optimi is the global leader in network simulation, prediction, optimization and service monitoring solutions for wireless carriers, network equipment manufacturers and engineering consulting firms. The company specializes in delivering cutting-edge, integrated applications that improve network performance while reducing client costs.

A bit of history: In October 2003, *Setram International* acquired the Wizard planning business from Agilent, integrated its products and re-launched the company as Optimi Corporation. In 2004 Optimi continued expanding and merged with Tartessos Technologies, a European software and research consulting organization.

Through these mergers and acquisitions, Optimi has developed a unique talent bank and ground-breaking solutions with emphasis on improved network performance and high quality service. Optimi combines RF engineering, the most advanced operations research techniques and software engineering best practices to deliver designs and optimization results that make substantial customer-specific improvements with maximum return of investment.

Optimi's elite team of engineers and software specialists come from all segments of the wireless industry. Combining advanced technological knowledge with practical operations expertise, these professionals are dedicated to helping clients solve complex network problems and manage difficult business and technology transitions.

Today, Optimi has more than 200 employees worldwide with corporate headquarters in Atlanta and offices in Madrid and Malaga, Spain; Mexico City, Mexico; Rio de Janeiro, Brazil; Dubai, UAR; and Singapore.
